

Stratospheric Aerosol Geoengineering (aka Chemtrails) Facts

Posted by [Deborah J. Whitman Chemtrail Evidence](#), [Featured](#) Tuesday, January 18th, 2011

Scientists and governments refer to, what is commonly known around the world as Chemtrails (not to be confused with normal jet contrails), as Stratospheric Aerosol Geoengineering (S.A.G.). It has been documented, as far back as the late 1980's, that the United States (U.S.) Government has been conducting covert S.A.G. programs. These covert operations are now being conducted worldwide throughout the U.S. and NATO countries on an on-going daily bases. This program is a global covert operation.

Famed scientist, Edward Teller, who at the time worked at Lawrence Livermore National Laboratory in Livermore, California and took part in the development of the Atomic Bomb and was the co-inventor of the Hydrogen Bomb, was the first scientist that came up with the theory that if you sprayed metallic particulates in the upper atmosphere you could cool the earth. A top geoengineering scientist, Ken Caldeira (Stanford University), who worked with Teller at the time, stated at the American Association for the Advancement of Science Annual Meeting in February 2010, that Teller tried to obtain funding for researching his theory but was unsuccessful.

It's now apparent that the U.S. government has implemented Teller's theory by spraying megatons of particulate heavy metals and chemicals like aluminum, titanium, barium, strontium and sulfur hexafluoride into the stratosphere.

Facts and Background Information

Hughes Aircraft Patent #5,003,186 -

In 1991 a U.S. patent was issued to Hughes Aircraft Company; the Stratospheric Welsbach Seeding For Reduction of Global Warming Patent (#5,003,186). It proposed injecting into the upper atmosphere, a "very fine, white talcum-like" powder of aluminum oxide, barium oxide and other oxides for the stated purpose of reducing Global Warming".

Space Preservation Act -

"On October 2, 2001, Rep. Dennis Kucinich introduced the "Space Preservation Act of 2001" (HR 2977), which called for the elimination of "exotic weaponry" from space. Among the weapons to be banned were weather-modifying weapons such as ... chemtrails." Though it was later amended to remove the word chemtrails, the original bill acknowledging this technology remains on the pages of the Congressional Record." See: Earth Island Journal: Stolen Skies: The Chemtrail Mystery at:

http://earthislandinstitute.net/journal/index.php/eij/article/stolen_stolen_skiesthe_chemtrail_mystery/

Public Awareness -

Public awareness is growing rapidly about the S.A.G. programs. In February 2010, Geo-engineering scientists from around the world met in San Diego. One of the main topics of discussion at the American Association for the Advancement of Science annual meeting was, "Can Geo-engineering Save Us From Global Warming?"

As a result of that meeting, geo-engineering scientists are researching creating an "aluminum shield around our planet" dumping yearly 10 to 20 megatons of aluminum oxide into our skies and upper atmosphere.

However, there is now substantial evidence and documentation that the S.A.G. programs have been ongoing for many years by our government and has had a devastating affect on our health and the environment. Visit:

Environmental Testing -

A Lake Shasta sample from Pit River Arm tributary tested at 4,610,000 ug/l (ugl=ppb or parts per billion), over 4,610 times the maximum contaminant level (MCL) for aluminum in drinking water for the State of California. A pond in Shasta County, in a "filtered location", tested "0" for aluminum when filled. After 1 ½ years exposure to the atmosphere, the pond tested at 375,000 ug/L or 375 times the MCL.

In addition, a snow pack sample taken from Mt. Shasta tested at 61,100 ug/L or 61 times the (MCL) for aluminum in drinking water for State of California.

Tree bark from dying trees has recently tested positive with aluminum, barium, strontium and titanium.

Health Affects -

Aluminum and barium are being found in dangerous levels in water and soil samples taken nationwide. Respiratory and neurological illnesses have risen dramatically and asthma is near epidemic levels in children. Numerous studies have connected aluminum exposure to neurological damage (like Alzheimer's) and a host of other diseases. Other related illnesses such as chronic fatigue syndrome, fibromyalgia and multiple-chemical sensitivities have steadily risen since the deployment of these on-going programs. The low-dose, long-term, exposure to these toxic chemicals and heavy metals has a devastating affect on our health by destroying our immune system and making people more vulnerable to disease and critical/chronic illnesses. Recent heavy metal testing shows off-the-chart ranges of toxic chemicals and heavy metals like aluminum and barium in young children.

The content of the fallout from these aerosols includes fibers, metal particulates and biological elements which have been detected through environmental testing. These micro-particles enter into our bodies and weaken our immune system, making us more acceptable to chronic illnesses both physically and psychologically. (Visit

Global Dimming -

According to NASA, the world has seen a 20% loss of sunlight and geoscientists now admit that aerosol spraying forms man-made clouds that spread to create a sky shield. The sky shield reduces sunlight and is called "global dimming".

Crop Reduction -

Blocking the sun negatively affects our crops and forests by reducing the amount of sunlight needed for photosynthesis. This causes a reduction of crop production. In addition, aluminum, barium, strontium and titanium has been detected in tree bark of weak and dying trees through certified laboratory tests. Our trees and plants are rapidly declining because of this environmental stress which make the trees vulnerable to fungus and pests.

In addition, aluminum is very detrimental to soils, changing PH levels and is lethal to many forms of aquatic life.

Artificial Clouds and Drought -

According to the National Center for Atmospheric Research, the only way to form artificial clouds in warm dry air is to introduce enough particulates into the atmosphere to attract and accrete all available moisture into visible vapor. If repeated often enough, the resulting rainless haze can lead to drought.

Atmospheric Conductivity –

Atmospheric conductivity and lightning strikes have increased dramatically since the apparent onset of these programs. Metallic particles increase atmospheric conductivity, increasing lightning frequency and intensity.

According to Science Daily, "...injecting sulfate particles into the stratosphere would have a drastic impact on Earth's protective ozone layer ... The study... of the National Center for Atmospheric Research (NCAR), warns that such an approach might delay the recovery of the Antarctic ozone hole.

Solar Radiation and Climate Change – “

Stratospheric aerosols”, are proposed by Geoscientists, as a way to manage solar radiation and climate change by aerosol spraying sulfates, aluminum, barium and other fine particulates into our upper atmosphere.

Solar Reduction -

The aerosol spraying of metal particulates also reduces solar intake as much as 70% on heavy spray days. This is caused because the man-made clouds and the sky shield blocks the sunlight.

Military To Own The Weather In 2025 -

The U.S. military has openly stated that it is their goal to “OWN THE WEATHER” by 2025. They are capable of affecting and controlling storms and the earth's electrical balance. They can manipulate radio frequencies and the electromagnetic spectrum for military and surveillance purposes. They can alter human awareness and behavior.

A research paper presented to Air Force 2025 in April 1996 states in part, “One advantage of using simulated weather to achieve a desired effect is that unlike other approaches, it makes what are otherwise the results of deliberate actions appear to be the consequences of natural weather phenomena. In addition, it is potentially relatively inexpensive to do. According to J. Storrs Hall, a scientist at Rutgers University.” See:

<http://www.fas.org/spp/military/docops/usaf/2025/v3c15/v3c15-1.htm>

H.A.A.R.P Program -

The High Frequency Active Auroral Research Program (H.A.A.R.P), located in Alaska, is a military surveillance operation that generates electromagnetic frequencies. There are other facilities like H.A.A.R.P throughout the world. Their activity, combined with the spraying of aerosols, may be the primary reason for “climate change/global warming. H.A.A.R.P. is capable of deliberately altering our climate and environment. In addition, it can alter human awareness and behavior.

German Scientists Exposed Weather Manipulation -

German scientists and meteorologists have exposed and are taking legal action against the German government for weather manipulation and counterfeiting satellite and radar imagery to mask the scope of those operations.

S.A.G. programs have been operating without our informed consent.
